

**BINARY TREE**  
Powering Enterprise Transformations®

Move your Domino servers to the cloud, while you strategically plan for Domino modernization on your schedule.

**DOMINO ON AZURE**

Managed service to address Domino modernization challenges

Do you still have production Domino servers active in your environment supporting business critical applications? Have you started to embrace other technologies and are tasks with maintaining hybrid collaboration and workflow environments? Are you interested in taking advantage of V11 and learn more about HCL's Roadmap for Domino? Do you have all the information about your environment needed to make the right decision? Today Domino customers have more options available to them than ever before. The creation and execution of a modernization plan can be daunting. At Binary Tree we have been helping customers make Domino modernization decisions for over 26 years. Our best practice approach is to work with customers to first completely analyze their existing environment, move it to a managed service in Azure with zero disruption to end users and then proceed with jointly forming and executing a modernization roadmap.

**Applications**

Planning, analysis & migration services

- A detailed analysis will identify all consolidation and archiving opportunities for immediate cost savings
- Domino Application Services can then plan and migrate or upgrade your Domino applications
- Migrate or upgrade while your server is in the cloud

**Efficiency**

Focus on strategic resources

- Binary Tree will handle all management of your servers, for continuity of support
- Eliminate complexities of managing servers in multiple environments
- Multiple options available – a new or existing Azure tenant, or even another IaaS provider
